A few additional historical dates:

11/1 Chesapeake proposed to work in NY
11/8 We responded that NY is not workable.

EST

Subject:

Chesapeake
developments

History and Status:

We told Chesapeake that we would not support going to New York state for a prospective case study. Since then, John Satterfield explained to Mike Overbay and others on our team that the problem is that we've lost 2 sites due to surrounding activities making our selection obsolete, and he couldn't identify a place where he could guarantee that this issue wouldn't recur.

We said that may be a risk we run. We asked if we could move over a short distance (~1 mi) so background investigation work would still be good. Chesapeake responded doesn't have that many holdings in northern Oklahoma anymore, and they would look for other places. We said we preferred a western location, preferably in R6. (This was before the developments on the prospective case study in the east).

Recent developments

Chesapeake was supposed to get back to us. In a later call (1 wk later), Chris Hill said they hadn't yet had time to work on it. So the call was rescheduled to 11/30, and recently, Chesapeake postponed again to 12/11.

Next steps

We agree that its time to call. As you mentioned, you could call Paul Hagemeyer. An alternative would be for me to call John Satterfield.

Please let me know if you'd like further information.
